FYP Exhibition Information Session – 4 March 2026

Prof. XU Weitao

FYP Coordinator

Overview

- FYP Exhibition Arrangements
 - 1) Key dates and Submission Timeline
 - 2) Event-day Logistics
 - 3) Best Poster Award Arrangement

Key dates and Submission Timeline

31 Mar 2026

- Submission of **Final Report & Poster**

7 April 2026

- Submission of **Presentation Slides, Demo Clip, Screenshot & Source Code**

22 April 2026

- **FYP Exhibition**

Department of Computer Science
香港城市大學
City University of Hong Kong

Event-day Logistics

- Date: 22 April 2026
 - Venue: Atrium, G/F, LI Building
 - Equipment provided: Display boards, tables, chairs, power supply
 - Up to 50 students per session, 4 sessions in total

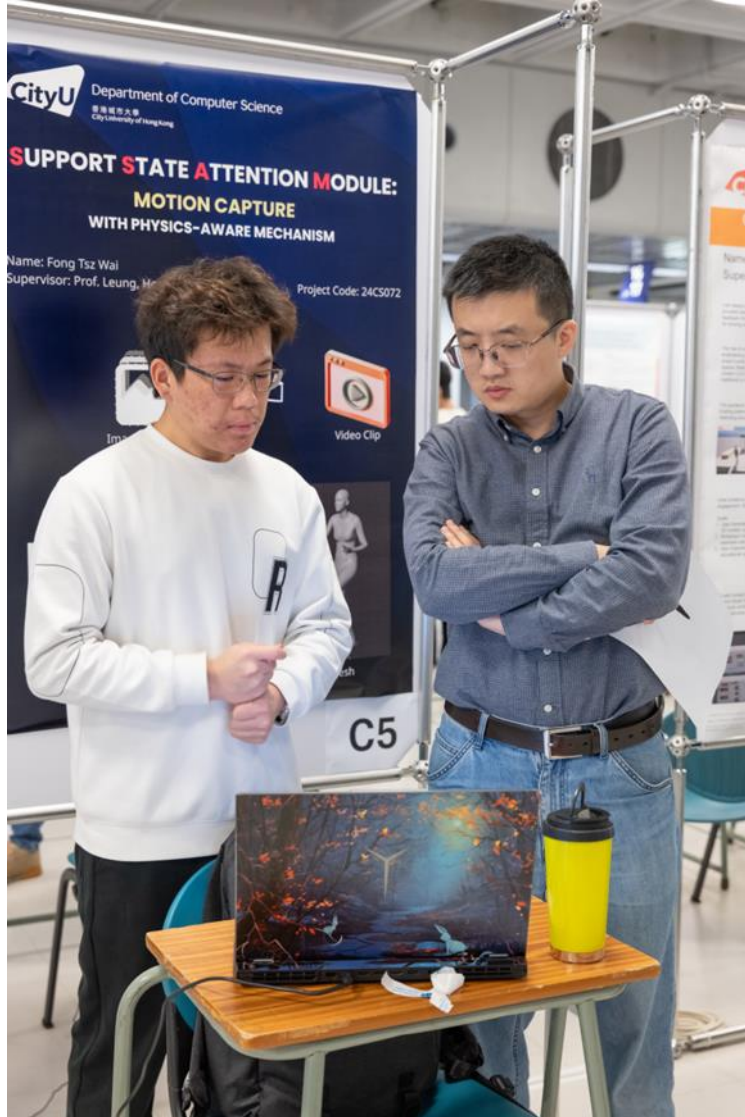

Sessions	Timeslots
Morning Sessions	AM 1: 9:30 – 11:15
	AM 2: 11:30 – 13:15
Afternoon Sessions	PM 1: 14:15 – 16:00
	PM 2: 16:15 – 18:00

Setting of last year's FYP Exhibition

Setting of last year's FYP Exhibition

Best Poster Award Arrangement

Eligibility: All participating FYP students who submit their posters on time

- Judging panel: Faculty members
- Judging criteria: Poster design, clarity, innovation
- Award announcement: End of exhibition event

Awardees will receive:

- A certificate; and
- A cash voucher

3D OBJECT & SCENE CREATION

NAME: LUNG LOK HIN (57157260)
SUPERVISOR: DR. LEUNG WING HO HOWARD

~ Unreal Engine 5 Levels ~

~ 3D Object Creation ~

3D Models Captured by:
LiDAR and 3D Scanner

Programmatically Denoised using:
Sparse Mask Filtering, Fill Small Boundaries,
Taubin Smoothing, Texture Baking,
Fast Quadric Mesh Simplification

~ Interactive Features ~

NPC with Dialog Tree

Chess Puzzle Text2SQL

www.chesspuzzletext2sql.com is a website that lets you search for chess puzzle with

Natural Language

Some queries you can try...

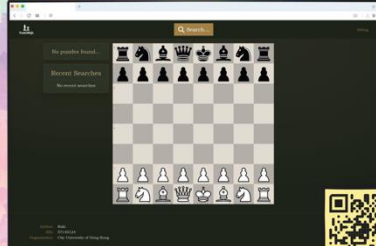

Search for Puzzles

My friend keeps playing the French Defense, can you help me?

Puzzles about sacrifice in the London

"rating" > 1800, themes = "Zugzwang"

Note: Access with HK Ip Address!

This works using Text2SQL

A natural language processing technology that converts human language text into SQL queries.

"Dutch Defense Midgame"

```
SELECT *
FROM t_puzzle
WHERE theme LIKE
"%middlegame%" AND
opening_tags LIKE
"%Dutch_Defense%"
```

1. Natural Question 2. SQL Statement 3. Chess Puzzle

The Result

A user interface that is
Intuitive Powerful User-friendly

With the takeaway that

Ease of use of Search Engine

Precision of Database Engine

Text2SQL

Text2SQL can act as a glue to combine the usability of Search Engine and precision of Database Engine

How it's implemented

1. Preface
State of the art Text2SQL is done using LLM, but naively prompting LLM is not very good! This produces an accuracy score of just 50% (generating wrong or invalid SQL statements)

2. Finding Similar Demonstrations
Using a prompt template is effective for Text2SQL, but replacing static demonstrations with those similar to the user's prompt can significantly boost accuracy!
But finding similar demonstrations is a form of semantic search, it is not easy to do!

3. Schema Masking
To support semantic search, replace database keywords in queries with generalized form. Then, we can use Jaccard Similarity

Benchmark*

89.6%
Accuracy

www.chesspuzzletext2sql.com can achieve accuracy of 89.6% when using Finding Similar Demonstrations and Schema Masking.

82.5% if prompting without Schema Masking
53.5% if prompting naively

*Done on self-made 135 synthetic benchmark records

Note: I have 27 demonstrations created synthetically!
